Go-Kart Speed Gauge
Part# 1-60-0206
\$179.00

The Vortex Pro 1200 Kart Speed Gauge is a clean, simple, rugged instrument for measuring and setting kart speeds from a spinning rear wheel. Based on a German-made Sigma Sport BC1200 cycling computer, it accurately displays the current speed, with the ability to store maximum and average speeds, as well as other functions. The Vortex can be used on either side of the kart, at speeds up to approximately 60 mph (100 kph). The auto-on and power-save features ensure many months of use without changing the batteries.

Some of the features of the Vortex Pro 1200 Kart Speed Gauge:

✓ **Simple**

The display will automatically “wake up” and show the current speed once the wheel is turning: no on/off buttons to worry about. Checking the max speed, average speed, and other stored items is simple and easy-there is almost nothing to learn.

✓ **Rugged**

The Vortex is drop-proof and intended for use in a demanding environment.

✓ **Accurate**

The Vortex is accurate to within 0.5 mph (0.8 kph) from 2 to 60 mph (3 to 100 kph).

✓ **Inexpensive**

The Vortex is priced for maximum value: quality, hand-made parts and elegant design at a very attractive price.

Quality, Warranty & Support

There is a 180 day, 100% warranty on anything that goes awry due to normal use. Receive a 100% refund if you return the unit within 2 weeks in as-new condition. The VortexTM head is fully rebuildable; no expensive parts to wear & replace.
